

Love – from the
tip of his toes
to the tip
of his nose

You love every little bit of your baby, but some little bits need more care than others – like his nose. Babies naturally breathe through their noses for the first few months, so a blocked nose makes feeding and sleeping really difficult.

FESS Little Noses® is a gentle saline solution that loosens and thins mucus to help clear a blocked nose so your baby can breathe easier, naturally. It's non-medicated so you can use it as often as needed, from the day your baby's born.

Available in drops for newborns and spray for older babies (spray available with or without aspirator).

Breathe easier, naturally™

Available from pharmacies nationally.
